

Thank you for buying our Fandango 360 Water Fountain. Please read instructions carefully before using. Keep instructions handy for future reference. Our pumps are carefully tested & certified to ensure both safety & optimum operating performance. Failure to follow the instructions and warnings in the manual may result in pump damage and/or serious injury. Be sure to read, thoroughly understand, save the owner's manual for future reference. Take care to ensure that the included lamp always remains submerged when in use at the risk of product damage or personal injury.

WARNINGS

1. Only the pump and lamp & electrical cord directly connecting the two are to come in contact with water. Under no circumstances should the other parts come into contact with water.
2. Do not plug in or otherwise use this product if any part of it appears to be damaged or operates abnormally. Have the product examined and repaired, if necessary by a qualified electrician.
3. Make a "drip loop" on the electrical cord connecting the pump to the plug by letting a portion of the cord hang lower than either the pump or the plug.
4. Do not let the pump run when not submerged in water. Doing so may damage the pump. Always submerge the pump first, and then plug in the unit. At the beginning, it probably can't pump water, because there is air in the pump and the tube. Simply pull the adapter out of the power source a couple of times and then it should work smoothly.
5. Never leave the water fountain unattended. Unplug when not in use.
6. Supervision is necessary when used around young children and pets.
7. If the electrical cord or plug get wet, unplug and allow to dry for a couple of days.
8. Do not operate the unit close or on furniture that can be affected by humidity or water spray.
9. Protect furniture by placing unit on a plate. Make sure the unit is placed on a stable surface.

OPERATING INSTRUCTIONS

- Slide the LED light inside the short rubber tube found underneath the fountain's main part (ensure the side with lights is facing up).
- Push LED light as far as it can go (do not force)
- Insert the pump's post into the long rubber tube. Attach LED light connector into the pump's plug
- Fill the water basin up to 3/4's with water.
- Put the fountain's main part on the basin, ensuring the connection between the light & pump and the AC adapter are outside the basin (do no submerge in water). Plug AC adapter into wall sock/power source.
- Unplug to turn off.

MAINTENANCE

1. Keep the fountain in good working condition by cleaning & changing the water every 3 days. Using distilled or purified water is recommended.
2. If debris is caught in the intake vents of the pump, disconnect the pump from the power source and rinse the pump under clean running water.
